## Introduction

The IA240 embedded computers are designed for industrial automation applications. The computers feature 4 RS-232/422/485 serial ports, dual Ethernet ports, 4 digital input channels, 4 digital output channels, and an SD slot in a compact, IP30-protected, industrial-strength rugged housing.

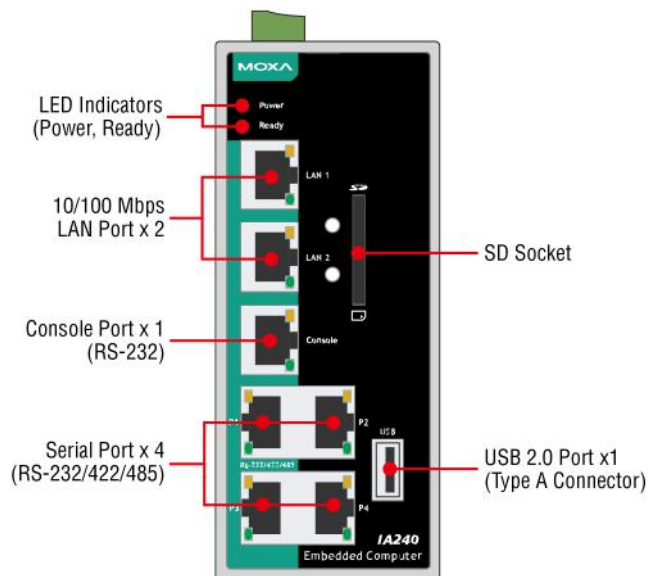

The IA240's vertical DIN-rail form factor makes it easy to install the computers in a small cabinet. This space-saving solution also facilitates easy wiring, making the IA240 a great choice as a front-end embedded controller for industrial applications.

Wide-temperature models of the IA240 are also available. The IA240-T model can operate reliably in a temperature range from -40 to 75°C, making it appropriate for harsh industrial automation environments.

The industrial design of the IA240 provides a robust, reliable computing platform. Due to their Arm-based architecture, the IA240 computers will not generate a lot of heat, making them ideal for industrial automation environments.
